Location(s): Brazoria County, Texas

Oil companies have reported on Friday two spills in Texas caused by Harvey's floodwaters, including one estimated at up to 1,500 barrels.

The Texas Railroad Commission said Friday that Denbury Onshore LLC had notified the agency of an oil spill in Brazoria County that occurred when a storage tank overflowed.

The company said the Wednesday accident near Friendswood spilled between 200 barrels (8,400 gallons) and 1,500 barrels (63,000 gallons) of crude oil. Some of the fuel flowed into an underground storm drainage system that empties into tributaries of Cedar Creek.

Most of the oil remained on the company's property, according to a spokesman for Denbury Onshore LLC.

A second spill was reported by Linn Operating LLC and involved an unknown amount of oil from a battery of storage tanks in Montgomery County.
